
EW-501 Rural Entrance

(This section last updated 01-15-14)

The Entrance Radius Chart is no longer included. Refer to Section [3K-2](#) to determine the appropriate SR and PR values to include in Tab [102-3](#).

W is the width of the surface including shoulders, if any.

For granular surfaced entrances, designers need to keep in mind the PGL is at the top of subgrade, not the top of the granular surface.
