
108-23B Traffic Control Closure Table(s)

(This section last updated 08-17-16)

This tabulation is intended to show when lane closures are not allowed. If a roadway does not have lane closure restrictions, this tabulation is not needed. The pictorial information shown should match what is described in the Traffic Control Plan ([108-23A](#)). The use of [108-23B](#) should supplement [108-23A](#), not replace it. Tab 108-23A is not intended to provide stand-alone traffic control guidance.

Use the space above each table to indicate closure location information, including roadway, lane(s), stage, etc. Refer to [108-23B example](#) for a sample plan sheet.

The Lane Closure Planning Tool (LCPTOOL) is used to determine appropriate lane closure times for a given roadway. The LCPTOOL is available at <https://secure.iowadot.gov/lcptool/Index.aspx>.
