
112-7 Rumble Strip Panels

(This section last updated 05-08-13)

To aid in selecting New or Existing under the Pavement column, use the following guideline:

Rumble strips can either be cut in existing pavement (which would include a resurfacing) or formed in new pavement (a full depth patch). If the rumble strips are being cut in, the pavement is existing. If they are being formed in a full depth patch, the pavement is new.
