

# **HR-395 STATISTICAL SUMMARIES OF SELECTED IOWA STREAMFLOW DATA THROUGH SEPTEMBER 1996**

**Key Words: Streamflow, Watershed, Steam Gaging, Flooding**

## **ABSTRACT**

Statistical summaries of streamflow data collected at 156 streamflow gaging stations in Iowa are presented in this report. All gaging stations included for analysis have at least 10 years of continuous record collected before or through September 1996. The statistical summaries include (1) statistics of monthly and annual mean discharges; (2) monthly and annual flow durations; (3) magnitudes and frequencies instantaneous peak discharges (flood frequencies); and (4) magnitudes and frequencies and low discharges. Also presented for each gaging station is a graph of the annual mean flows and, for most stations, selected values from the most recent stage discharge rating table.
